

T6-200 thermal image as viewed on Garmin G500H Displays

Multi Function Display

Primary Flight Display

The primary flight display (PFD, RH panel) shows the synthetic terrain image as approaching the threshold of runway 18.

The multi function display (MFD, lower LH panel) shows the map location of the aircraft over the runway threshold.

On the upper portion of the same display is the live streaming video of the T6-200 thermal image capable of revealing dangerous obstacles in day or night time conditions that ordinarily would not be observed.
