

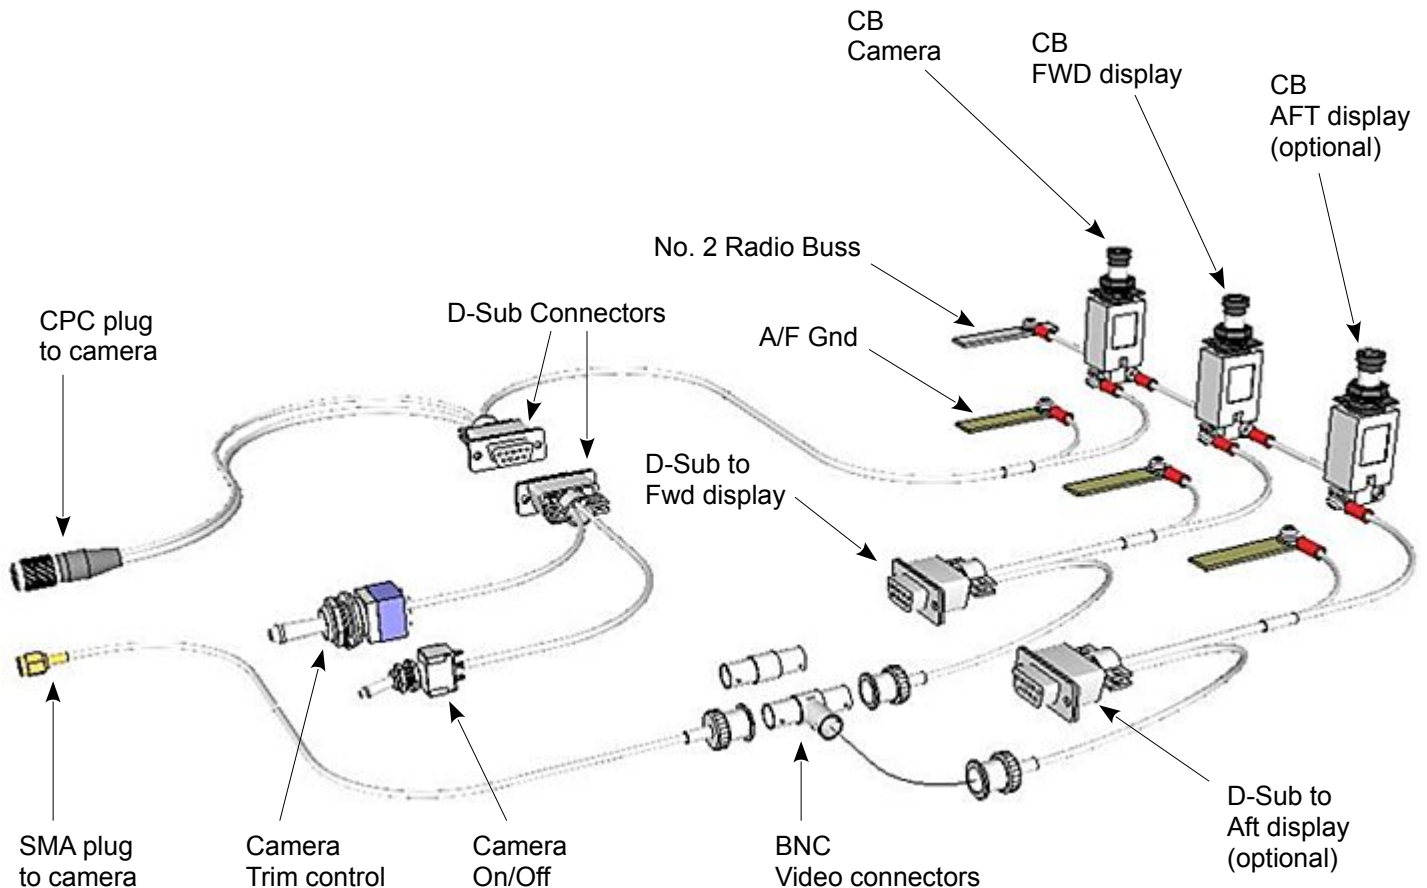

## Illustration Overview

T6-200 wiring harness for Sikorsky S-76A, B & C models

The above illustration details all the components required to support the T6-200 thermal imaging system.

The CPC and SMA plugs interface with the camera assembly for power, camera signal control and video output.

The camera trim control and on/off switches are connected to the camera harness via D-Sub connectors and are panel mounted.

The D-sub connector to the fwd display supports its own circuit for power and video input to the cockpit mounted display.

The D-sub connector to the aft display also supports its own circuit and is an optional install for video viewing in the passenger compartment.
